

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

FOREIGN AND INSULAR.

AUSTRALIA.

Plague—Brisbane.

The occurrence of two cases of plague was notified at Brisbane January 21, 1922.

CHILE.

Health of Children—Infant Mortality—Santiago.

The following statement is taken from a report published December 3, 1921, by *La Nacion*, of Santiago, Chile, on the results of examination of 1,064 children under 1 year, belonging to the poorer classes at Santiago, Chile:

Children with infectious hereditary disease, 216; tubercular, 80; weak, 199; with ricketts, 51; digestive organs affected, 357; with skin diseases, 38; with bronchial affections, 71. Of the number examined, 52 were apparently healthy, but of this number only 5 were declared normal.

Infant Mortality—1920.

During the year 1920, 14,918 births were registered in Santiago, with a total of 7,542 deaths during the first year of life—an infant mortality rate of 506 per 1,000 births. Of this number, 4,961 deaths occurred during the first three months of life. Insanitary habits of living on the part of the parents were stated as one of the principal factors responsible for the high death rate.

MEXICO.

Plague-Infected Rodents—Tampico.

Two plague-infected rodents were reported found at Tampico, Mexico, during the week ended January 21, 1922, making a total of five infected rodents found at that place from January 1 to 21, 1922.

Yellow Fever—Year 1921.

During the year 1921 and for the period January to October, inclusive, 115 cases of yellow fever with 53 deaths were reported in the Mexican Republic, as compared with 505 cases with 249 deaths reported during the year 1920. The occurrence was distributed according to States and Territories as follows: Colima, 7 cases with

4 deaths in two localities; Jalisco, 13 cases with 7 deaths (1 fatal case imported) in three localities; Sinaloa, 18 cases with 9 deaths in four localities, 1 case at Mazatlan being stated to have been imported; Tamaulipas, 1 case with 1 death at Tampico; Vera Cruz, 75 cases with 31 deaths, of which 2 cases were stated to have been imported; Territory of Quintana Roo, in the Yucatan peninsula, at one locality, 1 fatal case.¹

PHILIPPINE ISLANDS.

Increase in Cholera Prevalence—Manila.

Under date of December 23, 1921, a marked increase in the occurrence of cholera was reported from Manila, Philippine Islands. For the week ended December 10, 1921, two new cases with one death were reported; during the week ended December 17, eight cases were reported; and for the five days from December 18 to 22, there were reported 12 cases with 7 deaths. The deaths reported during the last-named period were not all of cases belonging to the group of 12 cases, some being listed from previous weeks. The cases came from widely separated districts of the city and showed practically no localization on any street. The organism of the outbreak was stated not to be of virulent type.

SPAIN.

Kalar-Azar Reported Among Children.

Under date of December 30, 1921, the appearance of a disease resembling Kala-Azar, which was stated to be epidemic among children in North Africa, was reported in Spain. The fleas which infest dogs were stated to be the agents of communication of the disease, and the Spanish medical authorities were stated to be taking precautions to protect children from contact with dogs.

UNION OF SOUTH AFRICA.

Plague—Orange Free State.

A suspected case of plague occurring in a native herd boy was reported from the vicinity of Hoopstad, Orange Free State, during the week ended December 10, 1921. Under date of December 19, 1921, the case was reported to be bubonic plague of mild type. A large-eared mouse (*Malacothrix*), picked up apparently sick on the Bothaville Commonage, Orange Free State, was reported proved by laboratory examination to be plague infected December 19, 1921.

¹ For dates of occurrence of first cases and names of localities affected see yellow fever table, p. 263.
